Military status: Postponed (student)

PROFILE

Final-year IT Security student with hands-on internship experience at a bank in vulnerability management, governance, risk and compliance (GRC), penetration testing and SOC operations. Building toward a career in DevOps and cloud engineering and studying for AWS Certified Cloud Practitioner.

EDUCATION

German International University (GIU)
B.Sc. Informatics and Computer Science, IT Security major — *Sep 2023 – Sep 2027*

Relevant coursework: Cryptography, Network Security, Ethical Hacking and Penetration Testing, Digital Forensics, Software and Mobile Devices Security, Business Continuity and Risk Management.

German International University in Berlin (GIU Berlin) — Berlin, Germany
Exchange semester (5th semester), Cybersecurity — *Sep 2025 – Feb 2026*

EXPERIENCE

Information Security Intern — Aug 2026 – Jan 2027
Ebank — *New Cairo, Egypt*

- Rotated across the bank's vulnerability management, GRC, penetration testing and SOC teams.
- Ran vulnerability scans with Tenable and analyzed the findings by CVE and plugin.
- Worked with the GRC team on employee risk assessments aligned with ISO/IEC 27001.
- Ran phishing simulations to test employees' security awareness.
- Performed internal network penetration tests on each floor of the bank's offices, supervised by the penetration testing team.
- Used IBM QRadar (SIEM) with the SOC team to monitor and analyze security events.

Cybersecurity Intern — Jul 2024 (1 month)
ICT Misr — *Sheikh Zayed, Giza, Egypt*

- Shadowed cybersecurity staff in their daily work, learning how businesses apply security in practice.
- Observed how the team works with clients and handles their security needs.
- Built foundational knowledge of core security concepts, common threat vectors and basic security controls.

PROJECTS

Explain This CVE: explain-this-cve.vercel.app | *JavaScript, Node.js, Vercel, NVD, CISA KEV, EPSS* — 2026

- Built a CVE checker that turns NVD, CISA KEV and EPSS data into a one-page brief for managers and analysts.
- Treated all upstream data and AI output as hostile: input validation, rate limiting, CSP with Trusted Types, 140+ offline tests including an XSS drill.

Personal site: lectrik0.github.io | *HTML, CSS, JavaScript, GitHub Actions, AWS CloudFormation* — 2026

- Built a static portfolio hardened against XSS (strict CSP and Trusted Types, tested with injection payloads) with zero third-party requests and AWS infrastructure as code deployed keylessly via OIDC.

CERTIFICATIONS & TRAINING

AWS Certified Cloud Practitioner — In progress

SKILLS

Security: Vulnerability scanning, network penetration testing, phishing simulation, risk assessment, web security (XSS, CSP), cryptography
Tools: Tenable, IBM QRadar (SIEM), Git, GitHub Actions
Cloud: AWS core services, IAM, S3, CloudFront, CloudFormation
Systems: Networking, Linux
Standards: ISO/IEC 27001
Spoken languages: English (full professional proficiency), Arabic (native)
